

# RELEASE NOTES

*Updated PPS for G-Series P25 Voice Pagers (G2/G3/G4/G5)*

**New PPS Version:** 4.0 (V0.4.0.41)

**Date:** 09/26/2024

## **New Features Added:**

---

- On first startup, added a prompt with information about the Unication PPS Improvement Program and the option to accept or decline.
- Automatically import old version Profile function on first startup.
- Supports copying knob data of one Profile to another Profile (CH Scan and Free Scan are not supported yet).

## **Bug/Issue Fixes:**

---

- Solved the problem caused by character interception when importing Trunked data by RadioReference API.
- Fixed P25T Check Frequency issues.
- Fixed issue when checking for the same TGID in Trunking in Zone.
- Solved the problem that the content in the P25T grid of the Zone two-dimensional table does not take into account the Call Alert, and a TGID List Error will be displayed.
- Fixed identical column names when importing CSV files.
- Fixed issue with links not opening properly in the Help section.
- Fixed DataGrid View bug when dragging item.
